Dear Paul,

I wanted to take this opportunity to let you know what a pleasure it has been to work with Bellsoft. Your team was instrumental in making our PeopleSoft EnterpriseOne implementation a success here at Southern Anesthesia & Surgical. Bellsoft were called in during the 2nd half of an aggressive Go-Live schedule which involved all departments within the company, and were able to provide experienced people whose professionalism and talent exceeded our expectations. Specifically:

- ◆ As our Application Designer and Technical Lead, Duke made an immediate impression upon our team from day one. The first project he was assigned had been previously quoted by another consulting group to take 4-6 weeks; he was able to create a working prototype in less than 3 days. His talent, breadth & depth of technical understanding and excellent interpersonal skills have made him a hero within our department and company.
- ◆ As our Report-Writing guru, Satish displayed an amazing ability to adapt and dive in head first even though he was brought in towards the end of the project. We were pleasantly surprised to discover that his abilities reached well beyond just report-writing and he was able to provide great value in assisting with Application Design, Data Conversions, Debugging and Documentation... no task to large or small. Throughout his time here and even after Go-Live time, his work ethic and attitude were unwavering. He will be a tremendous asset wherever he is working.

I would highly recommend Bellsoft for any organization seeking superstar technical consulting at a competitive rate and in a timely manner. Because of your team's efforts, we were in business on day one of Go-Live and have been up and running ever since.

Thank you for assisting us and helping make our PeopleSoft EnterpriseOne implementation a great success.

Regards,

Eric Rakov
Technology Manager
